# Lamuno Plus

Multi Scenes Usage Fluorescence  
Immunoassay Analyzer

- Accurate
- Convenient
- Reliable
- Popular
- Expansive

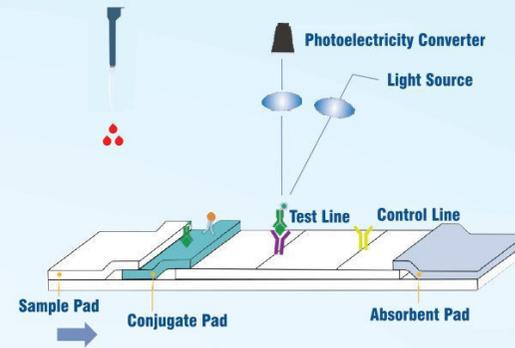

With Advanced  
Incubation Chamber

Powered By Innovation,  
Delivered In Budget

## Principle

Lamuno Plus uses an LED as the excitation light source. The emitted light from the fluorescence dye is collected and converted into electrical signal. The signals are closely related to the amount of fluorescence in dye molecules present on the spot under examination. After a test sample is applied to the Test Cassette, the test Cassette is inserted into LAMUNO PLUS and the concentration of the analyte is calculated by a pre-programmed calibration process. LAMUNO PLUS can only accept Test Cassettes that are designed specifically for this equipment. Lamuno Plus is equipped with a built-in Test Cassette Holder. The Test Cassette Holder will appear through the opening on the front surface of the equipment.

## Built-in Quality Control

Each test board has a test line and a quality control line, and the quality control line monitors each test
